# Optimize Logistics.

Intelligent video technology protects transport  
and logistics while improving processes

# Much More Than Just Security

How MOBOTIX technology can ensure safe and more effective operations and thus increase savings and revenue.

MOBOTIX security systems enable processes to be effectively optimized and develop considerable potential for generating savings and profit. By combining the reliability of MOBOTIX perimeter protection and security with the huge potential to work more effectively, you can protect your investment while maximizing efficiency and revenue.

## 1 Security

- Intrusion prevention (perimeter protection/roof surface monitoring)
- Anti-theft protection
- Access monitoring (license plate and container recognition)
- Early fire detection and protection

To ensure reliable operation in the long term, it's vital that important buildings are made secure. Only **authorized people and vehicles** (commercial vehicles, truck containers) should be allowed onto your premises and given access to **sensitive areas**. Objects and equipment must be protected against **theft, sabotage** and **fire**. Modern MOBOTIX hardware and software protects you against fundamental damage and the resulting costs.

## 2 Occupational Safety

- Safe handling of hazardous materials
- Checking that protective equipment is being worn
- Proper use of machines
- Maintenance in dangerous or inaccessible locations

Occupational safety refers to the **prevention of human error** and **machine malfunctions**. For example, intelligent MOBOTIX video systems immediately trigger an alarm if somebody is not wearing a mask or if someone who is handling hazardous substances falls down. Furthermore, the systems monitor areas **that cannot be seen** or **that are too dangerous for the human eye**, such as the inside of machinery or piping.

## 3 Process Optimization

- Monitoring systems
- Safeguarding cold chains (temperature screening)
- Incoming/outgoing goods (license plate recognition)
- Warehouse logistics/high-bay warehouses/control and monitoring of loading ramps (utilization)
- Save time using “digital explorations” across large-scale factory sites

MOBOTIX technology enables you to monitor specific parts of production lines, **detect faults immediately** or **count workpieces digitally**. It shortens machine downtimes and makes it possible to carry out many inspections via camera-assisted remote maintenance. This saves time and money that you can wisely invest in other ways. **MOBOTIX video technology** with **AI-based apps** can be synchronized with the machine control system and trigger alarms or follow-up processes autonomously, for example. Ultimately, all of these measures can result in savings and increase your revenue and profit.

## MOBOTIX Video Systems — Robust, Efficient and Cyber Secure

MOBOTIX video systems are used in the toughest environments on a daily basis. They are extremely robust and can withstand extreme temperatures and harsh weather conditions. The maintenance-free housing provides protection against dirt, humidity and corrosion.

Highly sensitive optics, thermal sensors, infrared emitters and intelligent apps can handle even difficult lighting and visibility, as well as harsh environmental conditions. And what's particularly important for industry is that MOBOTIX solutions are widely acclaimed for their **excellent cybersecurity**. The MOBOTIX Cactus Concept sets standards for video surveillance that you can rely on.

## Intelligent Video Security Solutions Made in Germany

MOBOTIX offers a comprehensive range of solutions for all aspects of video-based security. We develop high-quality, decentralized, energy-efficient systems that mean our customers save money on every MOBOTIX system installed.

Our motto Beyond Human Vision is also our mission: MOBOTIX is fully committed to making itself the most reliable company it can be, one that protects people and property by using intelligent, cyber-secure video technology to go beyond human vision.

**Your contact:** Talk to us.

We would be happy to assist you in finding a solution that offers maximum efficiency while ensuring that your company is as secure as possible.
